## CT Brain Without Contrast - Details

If you have questions or concerns regarding your test results, contact the clinician who ordered the test.

Common Test Results Flags: A=Abnormal, L=Low, H=High, more flags

### Study Result

#### Impression

Impression:  
No acute intracranial abnormality, specifically, no acute intracranial hemorrhage, herniation or hydrocephalus.

Electronically signed by Christopher Mutch M.D. on 4/25/2019 3:23 PM

#### Narrative

EXAMINATION: CT BRAIN WO CONTRAST

Date: 4/25/2019 3:16 PM

Comparison examination: None

Clinical History: Headache

Technique: Axial scans are performed through the brain. No contrast is given. CT Radiation Dose: CT dose index (CTDIvol) for the main acquisition is 47.77 mGy. Dose length product (DLP) for the complete examination is 670.48 mGy-cm. CT dose reduction technique utilized with one or more of the following: Automated exposure control and/or adjustment of the mA and/or kV according to patient size and/or use of iterative reconstruction technique.

Findings: Mildly motion greater study, limiting evaluation.

The ventricles and sulcal spaces are normal for age. There is no abnormal extra-axial fluid. There is no hemorrhage. There is no mass or shift. Gray-white distinction is within normal limits. No evidence of large vascular territory infarct.

There is no skull fracture. The orbits and sinuses are unremarkable as visualized.

### Component Results

There is no component information for this result.

### General Information

Ordered by Jeff Tai Li Chen, MD
